INTERCEPTOR WASH BAY

Instant Wash Facility with Environmental Protection

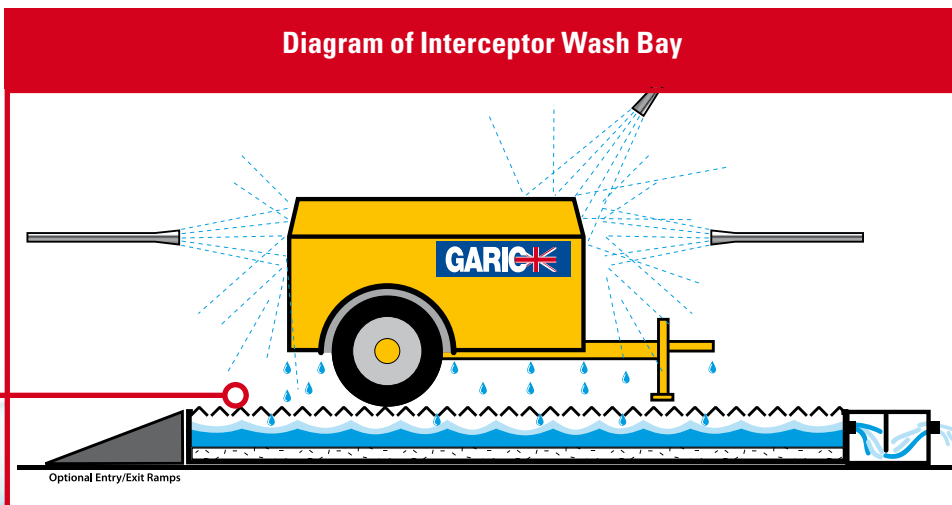

This product is derived from 'Interceptor Drip Tray', it has taken a simple redesign of specification to provide the perfect solution to the problem of stopping oil/grease and fuel from entering your drains at the wash bay.

This unit simply replaces your existing bay or provides an easily moveable temporary system anywhere!

Equipment is placed onto the wash area via lifting or by using a ramp. Then wash the item off, all the mud, silt, oil and fuel will collect along with the wash water in the reservoir for easy removal later.

The patented system retains any oil/fuel, mud etc., but allows filtered water to exit the unit to your foul drain system.
