

# WATER STORAGE

## Static Tanks and Mobile Tankers

**Water Bowsers**

**Mobile or Static**

**Large or Small**

We provide a vast range of tanks, bowsters and tankers for both 'site water' and 'drinking water' all with the option of pumps attached.

### Site water

includes clean water, dirty water, sludges and effluents, grout etc. Used for mixing, washing, cooling, hydro demolition, concrete saws, piling rigs etc.

### Drinking (potable) water

Tanks, bowsters, tankers and pumps with the security and confidence of cleanliness assured. Pumps and hoses provide a 'mains' pressure system.

All sizes available ex stock and delivered nationwide.

### High Volume Holding Tanks

We have large stocks of high volume tanks for the larger projects such as piling, river diversions, overpumping etc.

**High volume holding tanks**

**Nationwide delivery of fresh water, for both drinking and site use.**

### Sewage Holding Tanks

complete with overflow alarm and anti-smell system, 4" soil connection male pipe for exact coupling

### Dust Suppression Unit

complete with engine driven pumps

**Jetter Bowsers**

# WATER SETTLEMENT

## Settlement tanks and systems

With ever increasing demands to prevent 'dirty' water entering water courses, ponds, rivers and drains we provide a comprehensive range of settlement tanks for both heavy solids, suspended clays, debris and even oil/fuel.

We will assist you in choosing the correct piece of equipment that will ensure peace of mind when dealing with suspended solids etc.

Various sizes and capacities in stock

Weir Walls

Range of couplings

Various sizes and capacities in stock

### Settlement Tanks

With capacities from 600 gallons (2,725ltrs) up to 10,000 gallons (45,450ltrs). The rule of thumb is the more you are pumping the bigger the tank you need to enable settlement.

### Interceptor Settlement

This range of tanks will strip out the oils and fuels from your water, as well as the heavy solids.

### Vortex

This unique system gives unparalleled performance for sites with little available space and a need to clean the water quickly.

Road-Flo  
Pipe Ramp

Allows water to be pumped across traffic access without disruption.

Multi-Pump Tank

Allows multiple unit of pumps to recirculate water through a filtered settlement area, with a variety of hose connection sizes available plus pump carriage inclusive of 110V hoist.
